

Report of MaaS-API working group

*16/09/2020, session #33
10:00h-11:00h, Teleconference*

Attended by (13)

Bon Bakermans (Ministry of IenW)
Eddy Borremans (Nazza)
Edwin van den Belt (DAT.Mobility)
Kushagra Sharma (Radiuz)
Marijn Rovers (PON)
Martijn van der Linden (Mobiliteitsfabriek)
Perry Kruin (Emotion)
Peter van Brakel (g2g2)
Ruud Mollema (Ministry of IenW)
Sonila Metushi (KNV)
Stefan Bollars (Innovactory)
Stephan Rösli (SBB/Digital Infrastructure for Mobility)
Tjalle Groen (Taxistop)

Summary of decision points & feedback from actions from previous working session

The following tasks were defined during the previous sessions:

No.	Context	Task	Status	Due date
33.1	Presentations of linking initiatives to seek for collaboration	Bon to contact Paul and Stijn	To do	1-10-2020
33.2	Marketing milestones	All to think about next milestones for Elephant and Flamingo	To do	30-09-2020

1. Approval of report of previous working session

The report of the previous working session (#32) was reviewed during this session and has been approved. It will be added to GitHub.

2. WT1 Technical issues

- The WT is ready to release v1.0.0 and all current pull requests will be added to Dragonfly 1.0.0. The version will be interoperable with the current 0.9.0.

- The new version will also be uploaded to Swaggerhub. Only two or three different versions can be showed in the (unpaid) Swaggerhub.

3. WT2 Reference implementation and certification

- The new questionnaire was sent and the response will be discussed in the next meeting.
- The issue regarding identity management will be discussed in this WT.

4. WT3 Standards

- Some representatives of the WG had a meeting with Ferdinand Burgersdijk of the MaaS alliance to discuss adoption. The MaaS alliance tries to determine MIMs (minimal interoperable mechanisms. Ferdinand likes to use TOMP as the guideline for technical standards in the MaaS alliance. However, this could be difficult without creating dialects of TOMP. Ferdinand will consult the TOMP WG for further discussions.
- The WT will create a top 5 or top 10 of standards that need collaboration. Also, these organizations will be contacted to present their developments in the TOMP WG. For example Paul Theyskens on MyData.org or Stijn Vernaillen on the OSLO standards (33.1)

5. WT4 Dissemination and communication

- Main focus is to work on the WIKI and the corresponding Blueprint. Martijn moved the current Blueprint to the Github WIKI, and this will be reviewed before the release of Dragonfly.
- Some fixes were done to the website and the WT has now access to place content.
- The Ministry of IenW made a video explaining MaaS and TOMP. This will be ready before the release of Dragonfly and can be used on for example the website.

6. Any other business and tasks for next meeting

- Some MPs are developing a TOMP aggregator. That means that the connected TOs can also be reached by other MPs, or horizontal platform connections. The ministry will check those implementations (within the MaaS framework agreement).
- Until the release of Dragonfly we will have biweekly meetings. After that a new sequence (for example monthly) may be more convenient.
- Switzerland is working on a living environment in which everybody can join with a test application based on TOMP. There are a lot of political discussions going on but everybody agrees on TOMP.
- Milestones for marketing versions Elephant or Flamingo should give an extra property to the API. The roadmaps of the WTs do not show such milestones. One next milestone could be to make the API interoperable with the developing MaaS ecosystem, for example the communication with the National Access Points. Or when a user has planned, booked and payed a full MaaS journey with TOMP (33.2).

Next online meeting (working session #34) on Wednesday 30-09-2020, 10:00h
